

# AI Assisted Coding

## Assignment 7.5

Name: **K.Laxman**

Ht.no: **2303A51428**

Batch: **21**

Lab 7: Error Debugging with AI: Systematic approaches to finding and fixing bugs Lab Objectives:

- To identify and correct syntax, logic, and runtime errors in Python programs using AI tools.
- To understand common programming bugs and AI-assisted debugging suggestions.
- To evaluate how AI explains, detects, and fixes different types of coding errors.
- To build confidence in using AI to perform structured debugging practices.

Lab Outcomes (LOs):

After completing this lab, students will be able to:

- Use AI tools to detect and correct syntax, logic, and runtime errors.
- Interpret AI-suggested bug fixes and explanations.

- Apply systematic debugging strategies supported by AI-generated insights.

### **Task 1 (Mutable Default Argument – Function Bug)**

**Task:** Analyze given code where a mutable default argument cause unexpected behavior. Use AI to fix it. # Bug: Mutable default argument

```
def add_item(item, items=[]):
```

```
    items.append(item)
```

```
    return items
```

```
print(add_item(1))
```

```
print(add_item(2))
```

Expected Output: Corrected function avoids shared list bug.

**Code:**

The screenshot shows a code editor window titled "lab 06.py". The code is a Python script designed to demonstrate a common pitfall with mutable default arguments. It includes comments explaining the bug and its correction. The code uses AI-generated suggestions to fix the shared list issue.

```
1  '''Task: Analyze given code where a mutable default argument causes
2  unexpected behavior. Use AI to fix it.
3  # Bug: Mutable default argument
4  def add_item(item, items=[]):
5      items.append(item)
6      return items
7  print(add_item(1))
8  print(add_item(2))
9  Expected Output: Corrected function avoids shared list bug.'''
10
11 # Bug: Mutable default argument
12 def add_item(item, items=[]):
13     items.append(item)
14     return items
15 # Fix: Use None as the default value and create a new list inside the function
16 def add_item(item, items=None):
17     if items is None:
18         items = []
19     items.append(item)
20     return items
21 # Testing the corrected function
22 print(add_item(1))
23 print(add_item(2))
```

## Output:

The screenshot shows a terminal window with the following output:

```
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS SQL HISTORY TASK MONITOR
[Done] exited with code=0 in 0.172 seconds

[Running] python -u "c:\Users\akash\OneDrive\Desktop\betech_3_2\AI_Assisted_Coding\lab 06.py"
[1]
[2]

[Done] exited with code=0 in 0.236 seconds
```

## Task 2 (Floating-Point Precision Error)

**Task:** Analyze given code where floating-point comparison fails.

Use AI to correct with tolerance. #

Bug: Floating point precision issue

```
def check_sum():
```

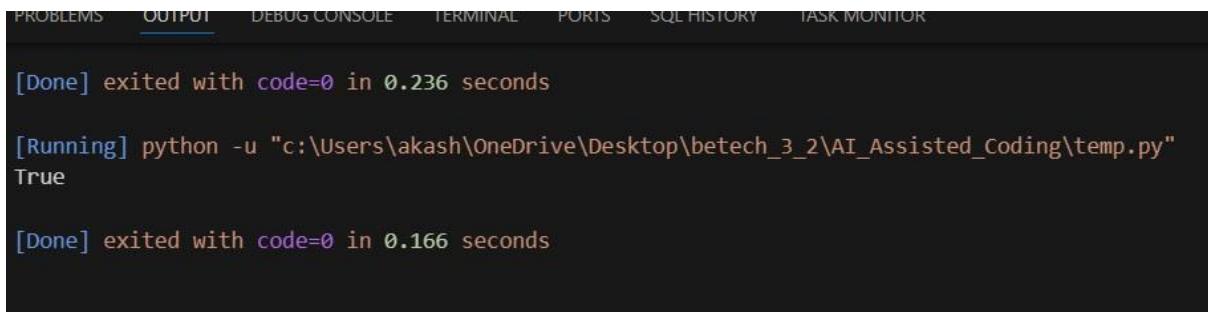

```
return (0.1 + 0.2) == 0.3
print(check_sum())
```

Expected Output: Corrected function

## Code:

```
temp.py > ...
1  '''Task: Analyze given code where floating-point comparison fails.
2  Use AI to correct with tolerance.
3  # Bug: Floating point precision issue
4  def check_sum():
5      return (0.1 + 0.2) == 0.3
6  print(check_sum())
7  Expected Output: Corrected function'''
8
9  # Bug: Floating point precision issue
10 def check_sum():
11     return (0.1 + 0.2) == 0.3
12 # Fix: Use a tolerance for comparison
13 def check_sum():
14     return abs((0.1 + 0.2) - 0.3) < 1e-9
15 # Testing the corrected function
16 print(check_sum())
17
```

## Output:

A screenshot of a terminal window with the following output:

```
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS SQL HISTORY TASK MONITOR
```

```
[Done] exited with code=0 in 0.236 seconds
[Running] python -u "c:\Users\akash\OneDrive\Desktop\betech_3_2\AI Assisted Coding\temp.py"
True
[Done] exited with code=0 in 0.166 seconds
```

### Task 3 (Recursion Error – Missing Base Case)

**Task:** Analyze given code where recursion runs infinitely due to missing base case. Use AI to fix.

```
# Bug: No base case def
```

```
countdown(n):
```

```
    print(n)
```

```
    return countdown(n-1) countdown(5)
```

Expected Output : Correct recursion with stopping condition.

**Code:**

```

temp.py > ...
1  '''Task 3 (Recursion Error [] Missing Base Case)
2  Task: Analyze given code where recursion runs infinitely due to
3  missing base case. Use AI to fix.
4  # Bug: No base case
5  def countdown(n):
6      print(n)
7      return countdown(n-1)
8  countdown(5)
9  Expected Output : Correct recursion with stopping condition.'''
0
1  # Bug: No base case
2  def countdown(n):
3      print(n)
4      return countdown(n-1)
5  # Fix: Add a base case to stop recursion
6  def countdown(n):
7      if n <= 0:
8          print("Blast off!")
9          return
0  print(n)
1  return countdown(n-1)
2  # Testing the corrected function
3  countdown(5)
4

```

## Output:

```

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS SQL HISTORY TASK MONITOR

PS C:\Users\akash\OneDrive\Desktop\betech_3_2\AI_Assisted_Coding> & C:\Users\akash\AppData\Local\Programs\Python\tech_3_2\AI_Assisted_Coding\temp.py

```

## Task 4 (Dictionary Key Error)

**Task:** Analyze given code where a missing dictionary key causes error. Use AI to fix it.

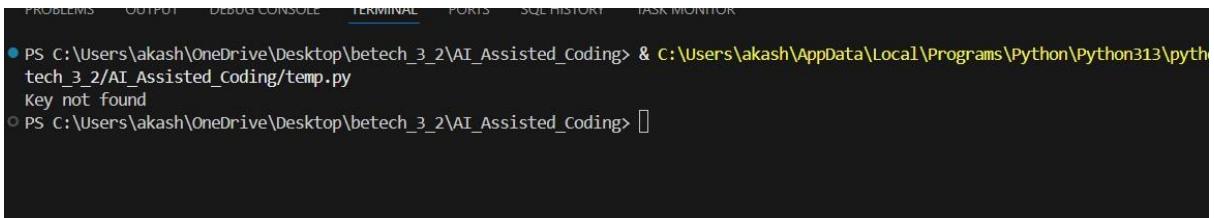

```
# Bug: Accessing non-existing key
def get_value(): data = {"a": 1, "b": 2}
print(get_value())
```

Expected Output: Corrected with .get() or error handling.

**Code:**

```
temp.py > ...
1  '''Task 4 (Dictionary Key Error)
2  Task: Analyze given code where a missing dictionary key causes
3  error. Use AI to fix it.
4  # Bug: Accessing non-existing key
5  def get_value():
6      data = {"a": 1, "b": 2}
7      return data["c"]
8  print(get_value())
9  Expected Output: Corrected with .get() or error handling.'''
10
11 # Bug: Accessing non-existing key
12 def get_value():
13     data = {"a": 1, "b": 2}
14     return data["c"]
15 # Fix: Use .get() method to avoid KeyError
16 def get_value():
17     data = {"a": 1, "b": 2}
18     return data.get("c", "Key not found")
19 # Testing the corrected function
20 print(get_value())
21
```

**Output:**

A screenshot of a terminal window with the following text:

```
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS SQL HISTORY TASK MONITOR
● PS C:\Users\akash\OneDrive\Desktop\betech_3_2\AI_Assisted_Coding> & C:\Users\akash\AppData\Local\Programs\Python\Python313\python tech_3_2/AI_Assisted_Coding/temp.py
Key not found
○ PS C:\Users\akash\OneDrive\Desktop\betech_3_2\AI_Assisted_Coding> 
```

## Task 5 (Infinite Loop – Wrong Condition)

**Task:** Analyze given code where loop never ends. Use AI to detect and fix it.

# Bug: Infinite loop

```
def loop_example():
    i = 0 while i < 5:
        print(i)
```

Expected Output: Corrected loop increments i.

**Code:**

```

temp.py > ↗ loop_example
1  '''Task 5 (Infinite Loop ⚡ Wrong Condition)

## Task 6 (Unpacking Error – Wrong Variables)

**Task:** Analyze given code where tuple unpacking fails. Use AI to

fix it.

```
# Bug: Wrong unpacking
```

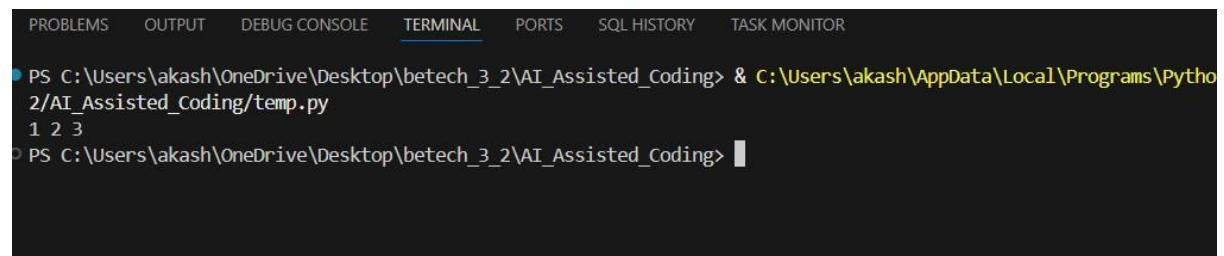

```
a, b = (1, 2, 3)
```

Expected Output: Correct unpacking or using \_ for extra values.

### Code:

```
temp.py > ...
1  '''Task 6 (Unpacking Error □ Wrong Variables)
2  Task: Analyze given code where tuple unpacking fails. Use AI to
3  fix it.
4  # Bug: Wrong unpacking
5  a, b = (1, 2, 3)
6  Expected Output: Correct unpacking or using _ for extra values.'''
7
8
9  # fix error by correcting the number of variables
10 a, b, c = (1, 2, 3) # Correcting the number of variables
11 print(a, b, c)
12
13
14
15
```

```

## Task 7 (Mixed Indentation – Tabs vs Spaces)

**Task:** Analyze given code where mixed indentation breaks execution. Use AI to fix it. # Bug: Mixed indentation def func():

x = 5 y =

10 return

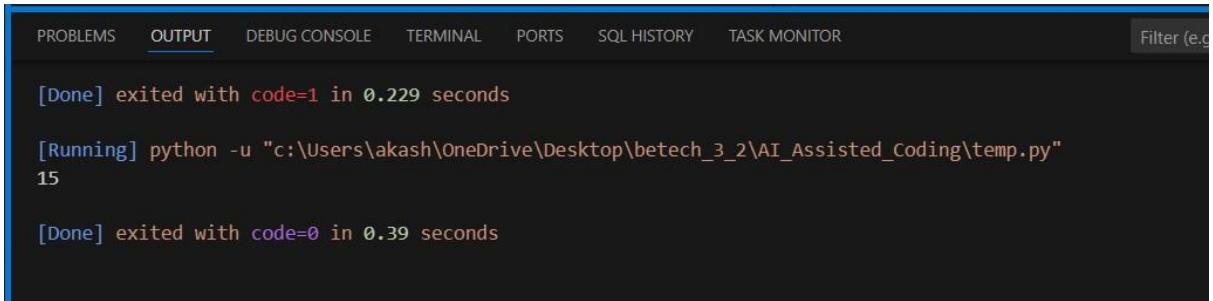

x+y

Expected Output : Consistent indentation applied.

**Code:**

```
temp.py > ...
1  '''Task 7 (Mixed Indentation [] Tabs vs Spaces)
2  Task: Analyze given code where mixed indentation breaks
3  execution. Use AI to fix it.
4  # Bug: Mixed indentation

6      x = 5
7      y = 10
8      return x+y
9  Expected Output : Consistent indentation applied.'''
10
11 # Bug: Mixed indentation
12 def func():
13     x = 5
14     y = 10
15     return x + y
16 # Fix: Ensure consistent indentation (using spaces)
17 def func():
18     x = 5
19     y = 10
20     return x + y
21 # Testing the corrected function
22 print(func())
23 |
```

**Output:**

The screenshot shows the VS Code interface with the 'OUTPUT' tab selected. The terminal window displays the following text:

```
[Done] exited with code=1 in 0.229 seconds
[Running] python -u "c:\Users\akash\OneDrive\Desktop\betech_3_2\AI_Assisted_Coding\temp.py"
15
[Done] exited with code=0 in 0.39 seconds
```

## Task 8 (Import Error – Wrong Module Usage)

**Task:** Analyze given code with incorrect import. Use AI to fix.

# Bug: Wrong import import

maths print(maths.sqrt(16))

Expected Output: Corrected to import math **Code:**

```
temp.py
1  '''Task 8 (Import Error ┌ Wrong Module Usage)
2  Task: Analyze given code with incorrect import. Use AI to fix.
3  # Bug: Wrong import
4  import maths
5  print(maths.sqrt(16))
6  Expected Output: Corrected to import math'''
7
8  # Bug: Wrong import
9  import math
10 print(math.sqrt(16))
11 # Fix: Correct the import statement to import math
12 import math
13 print(math.sqrt(16))
14
```

## Output:
